

Quality - Based Rates : Concepts, Challenges, Opportunities

SAMI/CCPRC Meeting
August 1, 2007

Richard N. Brandon, Ph.D.
Human Services Policy Center
University of Washington

Context and Issues:

- ❑ QRS as increasingly popular mechanism to set standards, 12+ states underway, 30 devel. – link to Tiered Reimbursement introduces cost of quality into rate setting
- ❑ Growing recognition that more qualified staff will cost more money – how much, who will pay, how assure quality in return?
- ❑ Early learning being considered within P-12 or P-16 contexts – pressures for alignment with elementary-secondary teacher standards

Conceptual Shift: Access to Price => Access to Quality

- Market Rates: intent was to assure subsidized children access to same price level of ECE as middle income children.
- Implicit assumption that price is linked to quality
- QRS introduces more direct and accurate way to measure quality
- When QRS standards entail higher provider costs, issue shifts to access to quality for different income groups.

Quality Based Rates

Several Objectives of Rate Setting:

- Reflect provider costs of meeting standards
- Provide two levels of incentives:
 - A. Individual providers have incentives to increase their quality rating
 - B. There are incentives for the distribution of quality to shift upward.
- Assure that all children have access to upper levels of quality
- Signals to parents as informed consumers.

Opportunities

- Accountability and public/policy-maker support: directly link quality, actual costs and payment rates.
- Way to get from 'here' to 'there.'
- Promote, monitor and examine process of quality improvement.
- Synchronize parent and professional views of quality.

Challenges

- ❑ Measuring Quality:
 - Structural vs. Observational Measures
 - Scales
 - Costs in time and money

- ❑ Improving an ECE system vs. rewarding better providers => dynamic ratings – two approaches (change-score; shift standards).

- ❑ Reimbursement reflect actual cost – transitional vs. ongoing.

- ❑ Market feasibility: assistance to providers, families to afford higher QRS levels.

Balancing Access, Quality – Two Approaches

1. Build rates from estimated costs of quality; cross-checks for other objectives:
 - Base quality \geq 50th percentile MR
 - Increases across levels sufficient incentives
 - Prices, rates affordable for families – link to assistance
 - Tradeoff: precise cost estimates vs. simplicity
2. Establish base rates from market prices to assure financial access; adjust for quality levels based on estimated cost differentials.

Quality-based Cost Examples

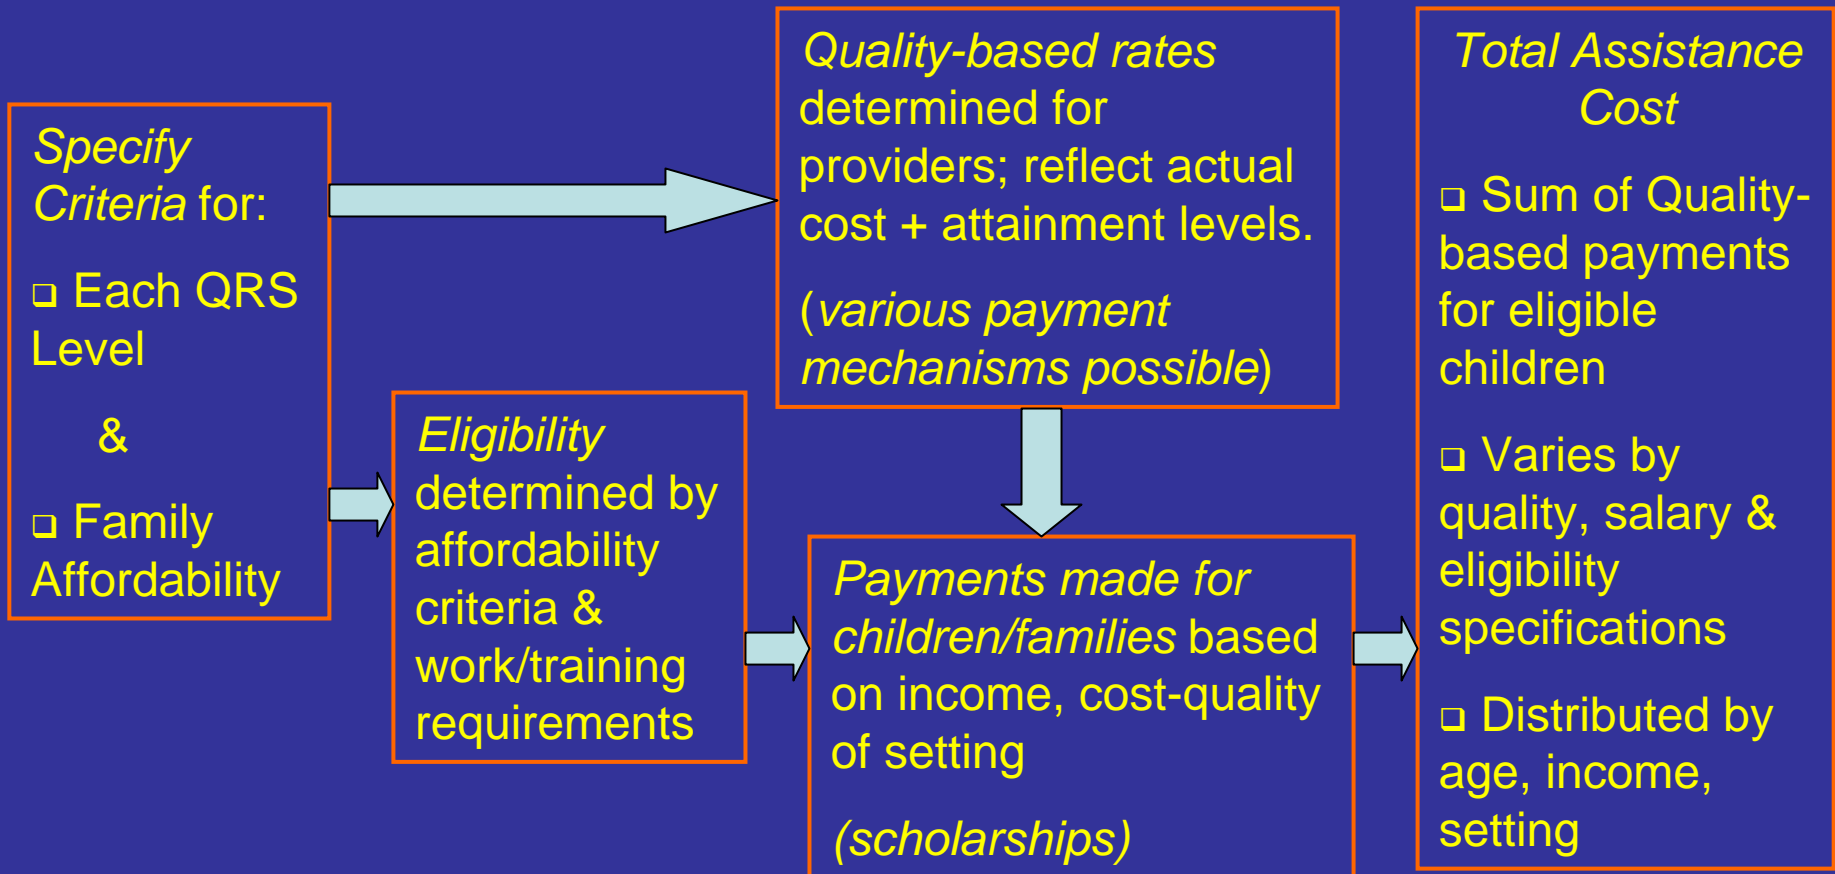

HSPC analysis estimating cost of high quality ECE in 6 states, 2 counties.

QRS application in 4 states, 1 county.

Feasibility: consider costs to

- ❑ providers
- ❑ families
- ❑ public

The Relationship Among QRS, Reimbursements Based on Quality, & Financial Access

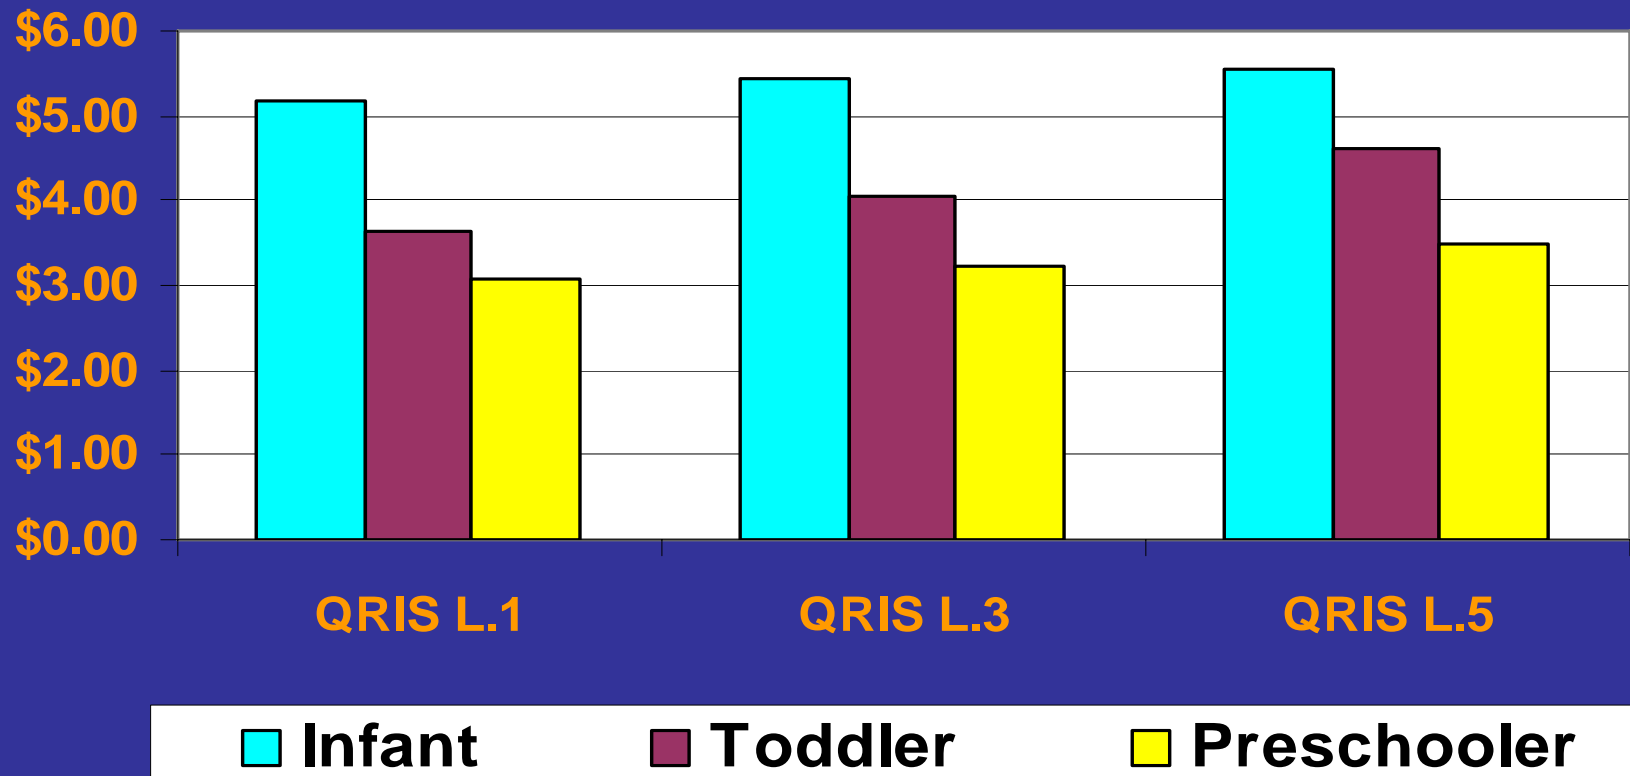

Major Provider Cost Drivers

- Ratios – great variation in age 3-5
- Professional Qualifications: CDA, AA, BA
- Compensation Guidelines: \$14 ~ \$28/hr
- Pace of Quality Attainment
- Accountability Structures

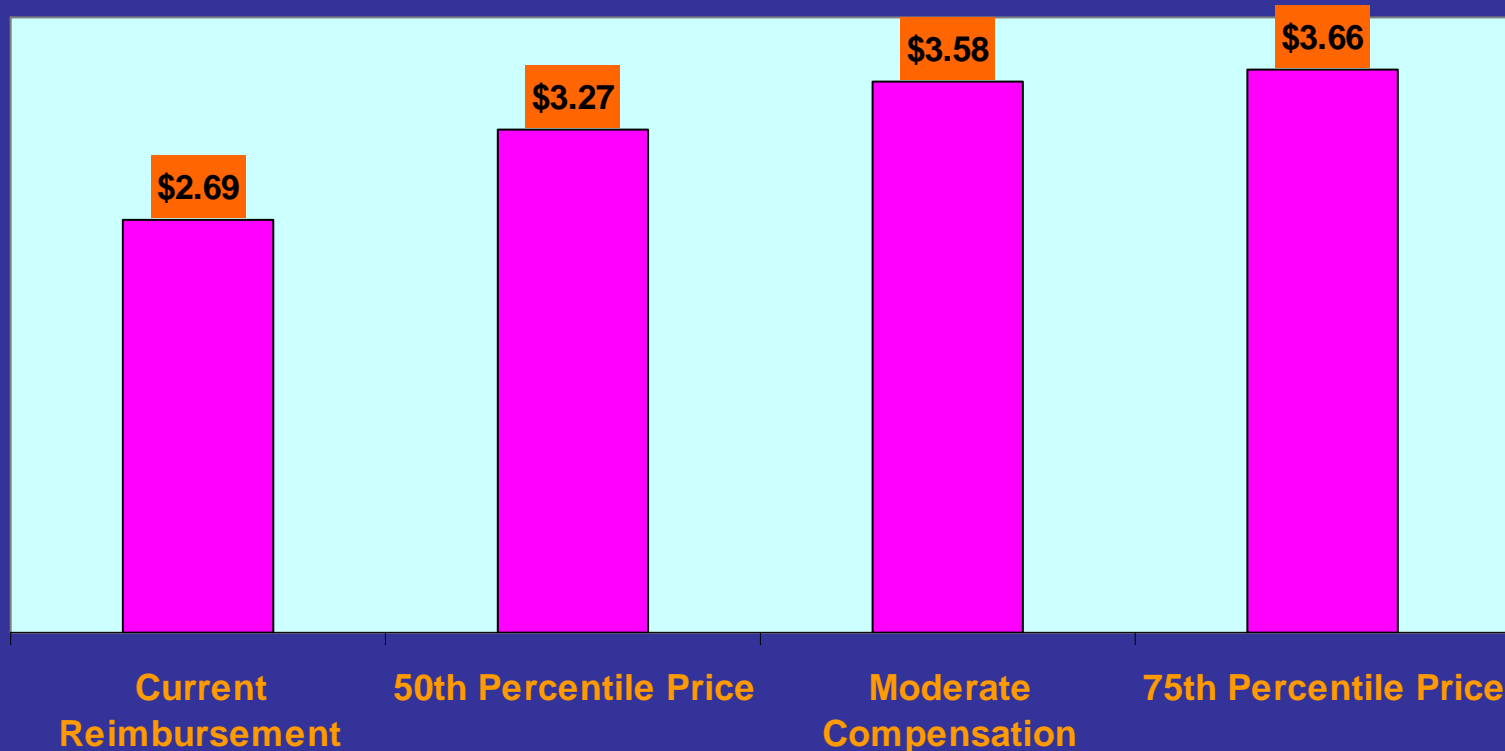

Findings For WA Early Learning Council

Hourly Cost of High Quality Early Learning, Centers - Moderate Compensation Range

- Level 1 costs near 50-th Percentile: basic financial access
- Infant = \$5-5:50/hr; toddlers = \$3.50-4.50; preschoolers = \$3-3.50
- Increases between Levels 1-3, 3-5 of 6-14%; greatest for Toddlers
- Cost per middle income without assistance = 17-20% per child.

High Quality Center Costs vs. Current Prices and Reimbursement Rates, Average Across Age Groups, QRIS Levels

- ❑ Moderate salary option yields costs close to 75th percentile prices; Higher compensation exceed 75th percentile.
- ❑ 33% higher than current state reimbursement rate.

Preliminary Findings, State # 2

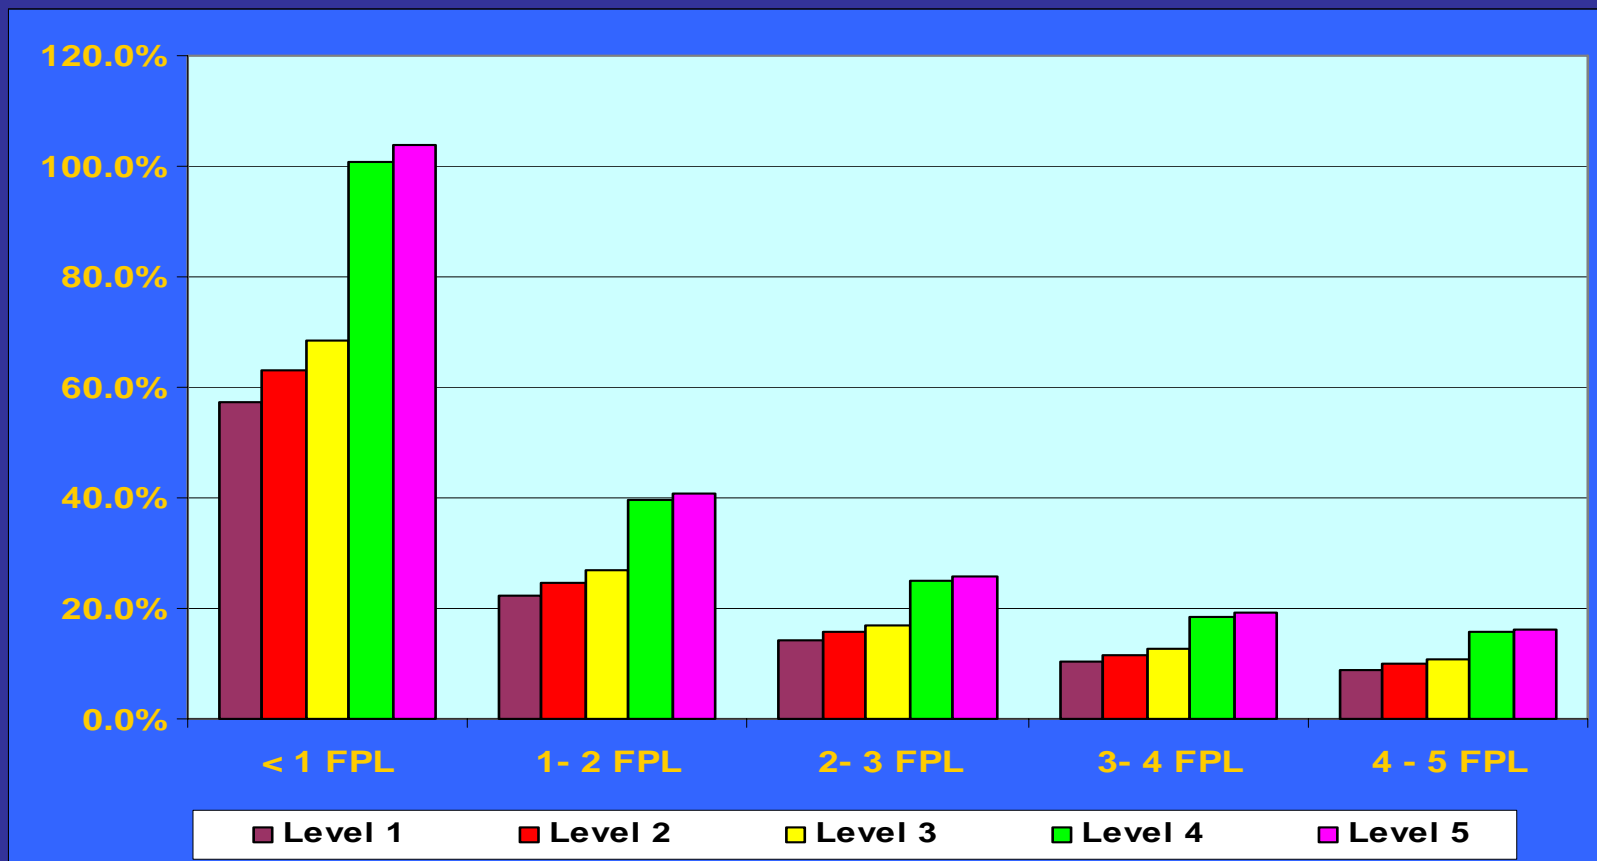

Costs to Providers by Quality Level, Age of Child, Centers

- ❑ 10-11% increase from level 1-2; 5-15% from L 2-3;
- ❑ 30-60% increase from L3-4 = majority of staff w/ college degree

Cost of ECE as Percent of Net Family Income, by Quality Level

[B-5; Per child, Full-Time, Full-Year]

L1-3 not affordable for low, moderate income
 L4-5 “ “ for mid-upper income

Conclusions

- A quality-based rate system can assure financial access if costs/rates are checked against market prices and family affordability criteria.
- Moderate-middle income families may not have access to upper levels of quality without financial assistance – can undercut market feasibility of QRS.

Context: Market Failure and Solutions

Market Constraints Yield Low - Mediocre Quality and Outcomes

Supply Constraints (providers):

- Lack qualified labor pool
- Competition from low-cost/quality providers (minimal protective regulation)
- No stable funding source
- Low subsidy reimbursement rates; no incentives to improve quality
- Lack of capital/reserves to invest in upgrading quality
- Lack of managerial expertise
- Diseconomies of small scale
- Cannot pay for release time, prof'l development

Demand Constraints (families)

- Low expectations about quality, outcomes
- Lack information about quality of competing provider entities
- Lack of income/financial assistance to afford high quality – eligibility restricted by income, employment status, location
- Fluctuating revenues as families go on/off subsidy eligibility
- Programs too small to affect most of market

Prices below quality-sustaining levels

Low-Mediocre Quality:

- Poorly qualified, under-compensated staff
- Little ongoing professional development
- Rapid staff turnover
- Lack of team building and expertise
- Children's attachment to caregivers interrupted

Low-Mediocre Outcomes

- Inadequate social, emotional, self-regulatory skills
- Inadequate cognitive development (lack school readiness)

Market-Oriented Solutions, Access to High Quality

Improve Supply

- Staff qualifications, certification
- Compensation guidelines
- Progressive QRIS
- Professional development
- Working capital, cash flow
- Provider networks, intermediaries

Increase Effective Demand

- Improve parent knowledge of quality; info campaigns, QRIS
- Parent feedback
- Assistance to families to afford high quality
- Unified B-5 service system

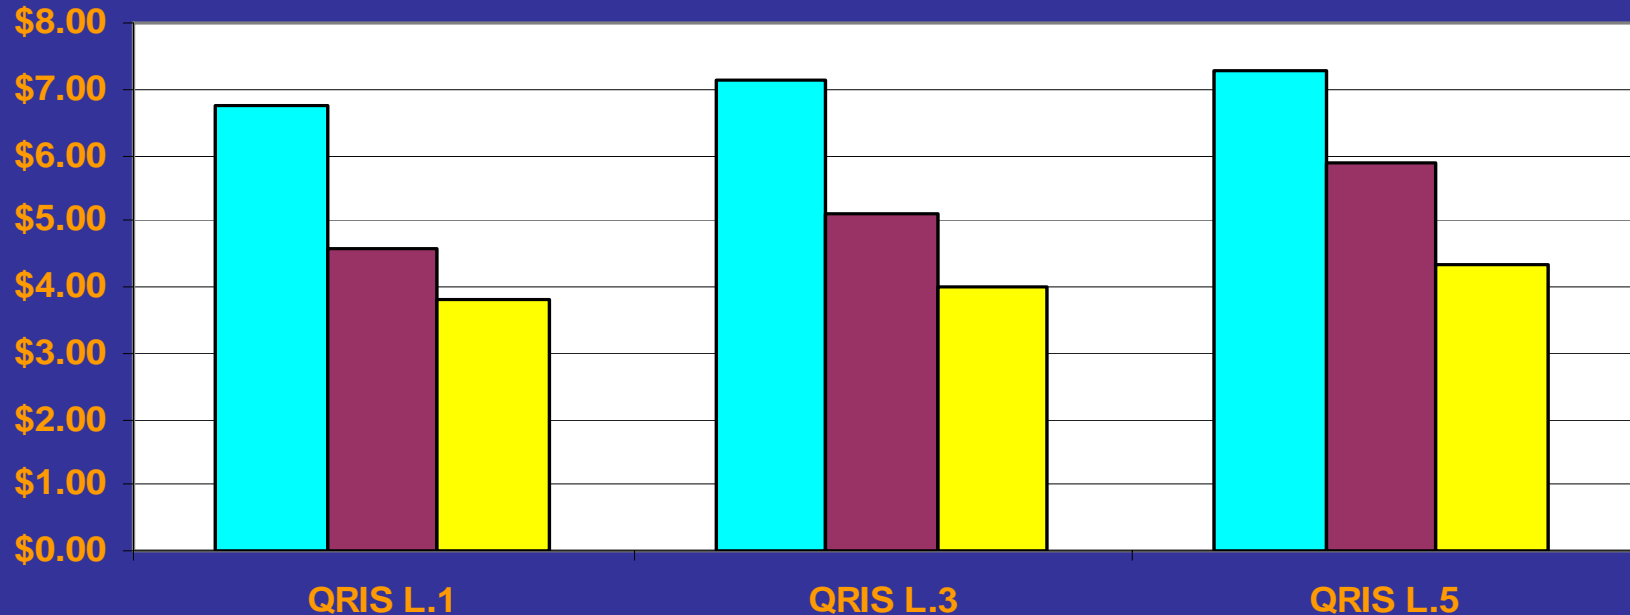

Accountability, Quality Improvement

- Observation-based QRIS
- Peer mentoring, monitoring of teachers, providers
- Teacher pay, provider reimbursement linked to observed quality
- Track child outcomes across statewide sample
- Private entity to monitor, recommend improvements

Professional Qualifications in QRS

- ❑ Complex matrices vary staffing by: age of child, responsibility (director; lead/assistant teacher) and QRS level. Less ed focus for FCC.
- ❑ NAEYC accreditation guideline of moving toward BA's in each class often top level; work out more like Head Start = majority with college degree (AA, BA, MA)
- ❑ Current licensing – no degree requirement – sometimes bottom level, sometimes exceed licensing for level 1
- ❑ Example, WA: lead teachers, average across ages:
 - L1 = 65% <AA, 10%AA, 25%BA
 - L3 = 50% <AA, 23%AA, 27%BA
 - L5 = 20% <AA, 51%AA, 29%BA;

Hourly Cost of High Quality Early Learning - Centers, Higher Compensation Range

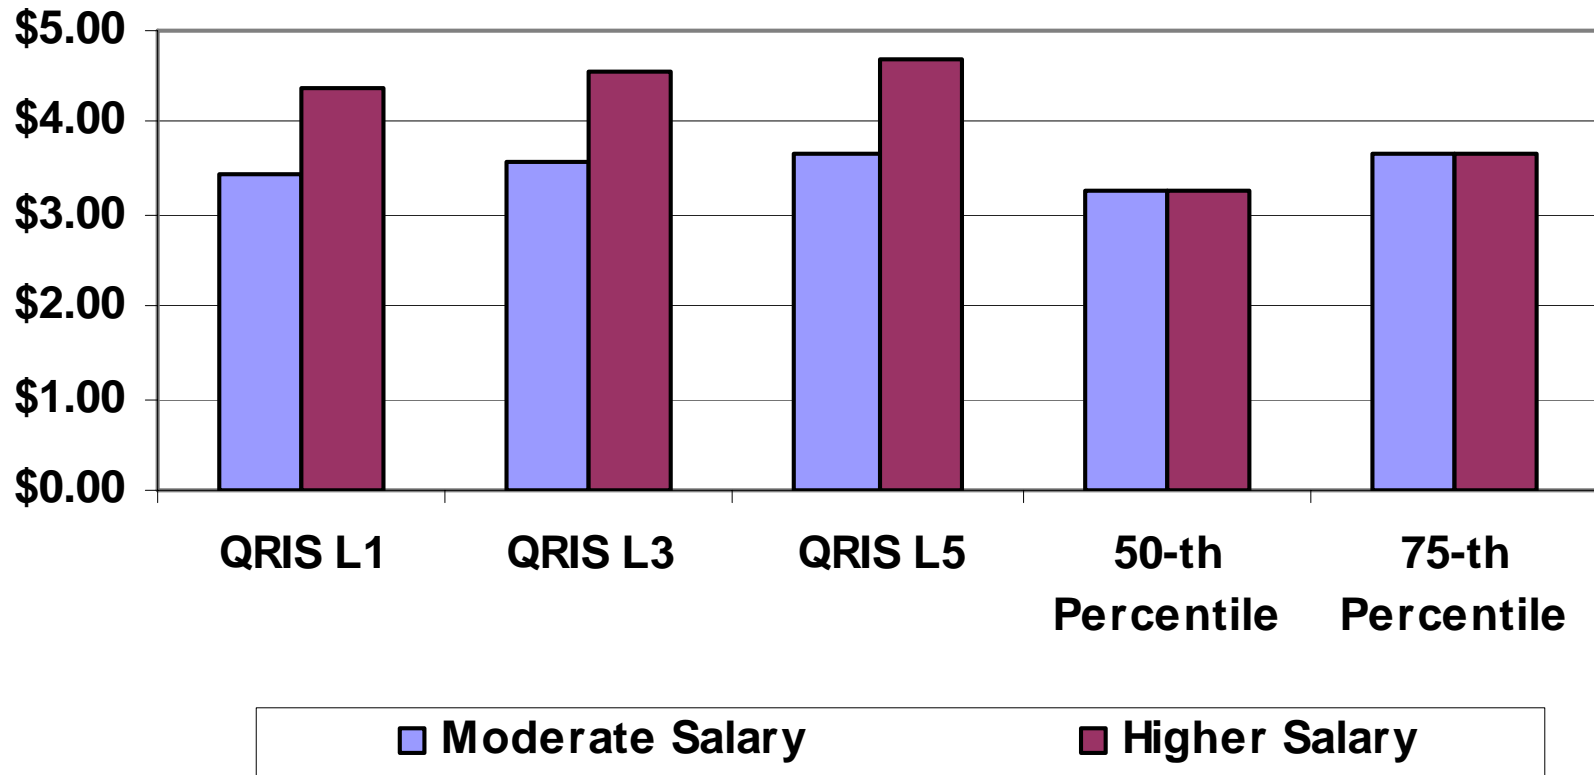

■ Infant

■ Toddler

■ Preschooler

- Level 1 costs near 75-th Percentile
- Infants = \$6-7/hr; toddlers = \$4.50-6/hr; preschoolers = ~\$4/hour
- Increases between Levels 1-3, 3-5 of 6-15%; greatest for Toddlers
- Cost per middle income without assistance = 22-25%

FCC Hourly Costs, Compared to Market Rates

- Moderate salary option yields costs close to 50-75th percentile
- Higher salary produces costs about \$1/hour higher than 75th percentile

Percent Change in Estimated Cost, Level to Level, By Age of Child
