QRS Evaluation Design and Measurement Issues

Kimberly Boller

CCPRC Meeting
Evaluation Session

July 31, 2008
Evaluation and Design Issues

- Identifying clear evaluation goals and research questions
- Matching a design to these objectives and requirements for rigor
- Timing and focus of the evaluation depending on phase of implementation
Rigorous Designs by QRS
Implementation Stage

- Planning/early implementation phase--Pilot or small-scale start up can use random assignment with some providers getting QRS supports in year 1 and the rest of the providers in year 2

- Mid-stage or mature implementation--State-wide or municipality-wide implementation QRS can use random assignment as refinements or changes are implemented—QRS versus QRS+
Questions for Discussion

- What are the main questions that drive your research agenda?
- What are the pros and cons of the designs you considered/are using/have in place?
- What types of technical assistance could you use for evaluation design and methodology?
